

Nanook table

Philippe Bestenheider
2008

Description

Table on three legs has steel top, frame and legs with glossy white, green, red or blue enamel finish. The table's top is comprised of separate die-cut steel plates that abstractly suggest the hexagonal structure of a snowflake. Tabletops interlock with each other in combinations of multiples, and can also be stacked: table legs connect through top's interstices.

Nanook is the first collection for Moroso by young Swiss designer Philippe Bestenheider, who has worked in the studio of Patricia Urquiola. Nanook is the result of his ongoing design research into surface fragmentation, molecular structures, the transition from two dimensions to three. A companion chair is also in the collection.
