

SOLAR

DESIGN JEAN MARIE MASSAUD/2012

Solar is a new type of object, a contemporary hearth around which to gather and chat, at home or outside. The surface finishes are different: glossy white or dark wood for the indoor version, with a characteristic rusty and textured effect for the outdoor version. The hemispherical body, made of polyethylene, is stable even when it is tilted by 15°. The angling determines the quantity of light diffused, allowing multiple effects and atmospheres to be created.
